Petty Cash App: Dataverse Schema Documentation

This document provides a simple and clear overview of the five core Dataverse tables created for the Petty Cash Web Application, detailing their purpose and exact column setup.

1. Department Table

Purpose: Stores the list of company departments. This helps assign managers and filter which requests people can see.

Column Name	Logical Name	Data Type	Description
Department Name	hr_departmentname	Primary Name (Text)	Name of the department (e.g., IT, Accounts).

2. Contact Table (Users)

Purpose: This is the standard table used for logging into the website. We added custom columns to handle user roles, managers, and real-time cash balances.

Column Name	Logical Name	Data Type	Description
User Role	hr_userrole	Choice	Employee, Manager, Accounts, Admin.

Column Name	Logical Name	Data Type	Description
Department	hr_department	Lookup	Links the user to the Department table.
Reports To Manager	hr_reportstomanager	Lookup	Links the user to their manager (another Contact).
Current Balance	hr_currentbalance	Currency	Tracks if the user holds company money or if the company owes them.

3. Petty Cash Request Table (Header)

Purpose: Stores the main submission form, the total amount, the receipt picture, and the manager's approval status.

Column Name	Logical Name	Data Type	Description
Request Title	hr_requesttitle	Primary Name (Text)	A short title or auto-number for the request.
Submitted By	hr_submittedby	Lookup	Links to the Contact who submitted it.

Column Name	Logical Name	Data Type	Description
Department	hr_department	Lookup	Links to the Department table.
Receipt Image	hr_receiptimage	File / Image	The picture of the receipt.
Total Amount	hr_totalamount	Currency	Total cost of all products added together.
Purpose	hr_purpose	Multiple Lines of Text	Reason for the expense.
Approval Status	hr_approvalstatus	Choice	Pending, Approved, Rejected.
Manager Comments	hr_managercomments	Multiple Lines of Text	Notes left by the manager.
Assigned Manager	hr_assignedmanager	Lookup	Links to the specific manager reviewing it.
ERP Sync Status	hr_erpsyncstatus	Choice	Not Synced, Synced, Failed.
Payment Method	hr_paymentmethod	Choice	Cash, Card / Online, Borrow

4. Petty Cash Line Item Table (Products)

Purpose: Stores each individual product bought during the request. This links to the header table so you can put multiple products under one receipt.

Column Name	Logical Name	Data Type	Description
Item Name	hr_itemname	Primary Name (Text)	Name of the product.
Parent Request	hr_parentrequest	Lookup	Links this product back to its main Petty Cash Request.
Category	hr_category	Choice	Stationery, Travel, Maintenance, etc.
Quantity	hr_quantity	Decimal Number	Number of items bought.
Unit Price	hr_unitprice	Currency	Cost per single item.
Total Price	hr_totalprice	Currency (Simple)	Quantity multiplied by Unit Price.
Other Category	hr_othercategory	Single Line of Text	Details when Category is Others. Stored on each Line Item, not the Request header.

Commented [1]: Corrected from Calculated: the live Total Price column was confirmed Simple. The client writes and verifies Quantity multiplied by Unit Price.

5. Cash Transaction Table (History)

Purpose: Acts as a history book tracking every time money is given out, spent, or returned. This is used to calculate the user's current balance safely.

Column Name	Logical Name	Data Type	Description
Transaction Ref	hr_transactionreference	Primary Name (Autonumber)	A unique ID for the history log.
Employee	hr_employee	Lookup	Links to the Contact.
Transaction Type	hr_transactiontype	Choice	Advance Given, Expense Approved, Cash Returned.
Amount	hr_amount	Currency	Amount added or deducted.
Linked Request	hr_linkedrequest	Lookup	Links to the Petty Cash Request (Optional).
Notes / Purpose	hr_notespurpose	Single Line of Text	Details on why the cash moved.

Confirmed balance rules and proposed schema addition

The existing Cash Transaction table is the balance ledger. Its logical name is

hr_cashtransaction and its entity set is hr_cashtransactions. No additional balance table is required.
Transaction types: Advance Given 123140000 adds to balance; Expense Approved 123140001 subtracts; Cash Returned 123140002 subtracts. Amounts are positive. Reimbursement uses Advance Given. Everyone starts at zero.
Positive balance means company cash held by the employee. Negative means the company owes the employee. Both approved Own Pocket and Company Cash requests subtract once. Pending and rejected requests do not affect balance.
Contact hr_currentbalance is a server-maintained summary; Cash Transactions remain the source of truth. The new website pages sum the employee ledger and do not directly overwrite the summary.
Proposed, not yet created: hr_postingkey (schema hr_PostingKey), Text, maximum 100 characters, with an active unique alternate key. Accounts operations use a UUID; approved expenses use expense-<request-guid>. The existing autonumber reference does not prevent duplicate expense postings.
Receipt upload is mandatory in the client. hr_receiptimage stores one file per row; multiple attachments require related attachment records and are not implemented by this version.
Cash Returned means physical cash returned by the employee, not arbitrary manual balance correction. Approved financial history must not be silently edited or deleted.
